

PhosEx rapid

DE Dosierung: Immer auf gesamten Aquarieninhalt:

UK Dosage : Always for the total aquarium content:

PO ₄	Dosierung / Dosage
> 2,4 mg/l	10 ml / 40 l
> 1,2 mg/l	10 ml / 80 l
> 0,6 mg/l	10 ml / 160 l

Wiederholung bei Bedarf
Repeat as required

UK PhosEx rapid

■ Eliminates phosphate

How JBL PhosEx rapid works: A liquid iron compound reliably and permanently absorbs phosphates dissolved in the water, preventing the undesirable growth of algae. The effect is made visible by initial brown clouding which disappears after 2 - 24 hours. The water becomes crystal-clear. The absorbed phosphate can be removed from the water by cleaning the aquarium filter and siphoning off the substrate with JBL AquaEx.

Application: First test the carbonate hardness and use JBL AquaDur to increase it to at least 4° KH. **Shake the bottle before use, then use immediately.** The product should be added to the aquarium in a place with good water movement. One application absorbs up to 3 mg phosphate / liter. Repeat treatment as required (check KH). Clean the filter and substrate the following day.
